Kelly-Moore Paints

Kelly-Moore has two lines of zero-VOC, low-odor paints: Enviro Coat and Green Coat - as well as eCoat, a line of recycled paints. These premium paints are high performance, yet they maintain good interior air quality.

Enviro Coat is a 100% acrylic interior paint that cleans up easily with water, is USDA-acceptable and contains an anti-microbial agent to control odors.

Green Coat is a waterborne interior paint that is free of air-polluting solvents. eCoat is made with at least 50% post-consumer

waste paint and is also easy to clean with water.

Each paint comes in custom-mixed colors, as well as stock colors and finishes.

Phantom Screens®

Phantom Screens® offers an interesting solution to reducing energy waste: retractable screening that cuts down on heat and glare, ventilates naturally, controls insects and best yet, disappears when not in use to offer completely unobstructed views from your house.

Phantom has a variety of colors and levels of opacity for doors and windows, not to mention your choice of manual retraction or automated controls.

The screens are very versatile and are engineered to block between 40 and 100%

of the sun's heat and UV rays. By reducing the heat load and boosting natural daylight in your home, the screens cut down on energy use. During the winter, they can help reduce heat loss and even improve thermal performance.

Phantom Screens® are truly an innovative and stylish option for home owners seeking sustainable design and a reduced carbon footprint.

Progress Lighting Le Papier Sconces

By replacing the most commonly used light fixtures in your home with energy efficient "green" lighting solutions - such as CFL or LED options - you will ultimately reduce energy and maintenance costs associated with lighting.

It can be tricky to find stylish wall sconces that hide CFL bulbs (which can be a bit bulkier than incandescent bulbs), but Progress Lighting's line of sconces are designed specifically to harness the power and brilliance of energy efficient CFL bulbs or LED lighting.

The Le Papier series features decorative handmade paper in several patterns and colors, as well as end caps that allow luminance both above and below the fixture.

With these sconces, you can use long-lasting CFL bulbs or LED lighting without sacrificing aesthetic appeal. There are six paper options to choose from, and the end caps come in brushed nickel or antique bronze.
