

Thank you for purchasing a Phantom motorized screen with clear vinyl

Phantom's motorized screens have been designed to give you many years of trouble-free and reliable operation. The clear vinyl material will help you control the temperature in your outdoor living space and extend its use throughout the year.

To ensure you enjoy the best out of the screen, please remember the following:

1. Following installation, leave your screens down for at least 48 hours with the slidebar slightly off the surface to allow the vinyl to straighten.
2. The vinyl should be completely dry when it is rolled up – otherwise there will be a risk of clouding (see "Troubleshooting" section on the reverse of this card).
3. Creases and ripples in the vinyl "window", perimeter vinyl and welds are to be expected. When the vinyl is rolled down on a sunny day, the warmth will relax the vinyl and reduce the rippling or creases.
4. The vinyl will stiffen in colder temperatures and not roll up or down as easily.
5. In order to prevent possible damage, the screen should not be used in temperatures below freezing.
6. Ensure there are no obstacles in the path of the screen's retraction. Always be present and watch the screen roll up or down.

PLEASE NOTE:

The vinyl screen is not covered by our Warranty and therefore proper operation, care and cleaning of the vinyl is vital (see "General Cleaning Instructions" section on the reverse of this card).

PHANTOM MOTORIZED SCREEN WITH CLEAR VINYL

GENERAL CLEANING INSTRUCTIONS:

We do not make any specific recommendations other than the following:

1. Do not use Rain-X, Pledge, or Plexus - this will cause hazing, discoloration and distortion over time.
2. Do not leave screens rolled up over prolonged periods.
3. Retract the screens nightly to avoid clouding from trapped moisture, fold distortions, etc.
4. Wash regularly, removing salt or debris first by spraying down the screen - not with a pressure washer. Beware of washing with trapped grit in your cloth mitt.
5. Use a good grade polish, such as IMAR Strataglass™ Polish or Collinite Insulator Wax, periodically to protect surface from the elements.

TROUBLESHOOTING:

Cloudy vinyl

Your clear vinyl may become clouded if moisture is trapped in it when the screen is rolled up. To remove the whiteness, expose the screen to direct sunlight during the day and it should gradually disappear.

Wavy vinyl

Waves may form on the screen if it is rolled up for a long time. You can remove them by allowing the sun - on a hot day - to thoroughly warm the vinyl. This will help to remove the waves or ripples.

Water not running off the vinyl

Build-up on the surface of the vinyl may cause poor water shed off the vinyl screen. Wash thoroughly first (see General Cleaning Instructions on the left) and then apply a polish such as IMAR Strataglass™ Polish or Collinite Insulator Wax. This will help to return the vinyl to a slick finish. Be meticulous about your cleaning and polish cloths - any dirt particles may scratch the vinyl.
